Clinical Policy: Transcatheter Closure of Patent Foramen Ovale

Description
Patent foramen ovale (PFO) is a congenital cardiac lesion which is generally asymptomatic and affects up to a quarter of the population. PFO can present with an array of significant clinical complications, including cryptogenic stroke. This policy describes the medical necessity requirements for the percutaneous transcatheter closure of a patent foramen ovale with the Amplatzer™ PFO Occluder or Gore® Cardioform Septal Occluder.

Policy/Criteria
I. It is the policy of health plans affiliated with Centene Corporation® that the percutaneous transcatheter closure of PFO with an FDA-approved device (Amplatzer PFO Occluder or Gore Cardioform) is medically necessary to reduce the risk of recurrent ischemic stroke when meeting the following indications:
   A. Age ≥ 18 and ≤ 60;
   B. Both a neurologist and a cardiologist confirm all of the following:
      1. PFO with a right-to-left interatrial shunt detected by bubble study;
      2. Cryptogenic stroke caused by a presumed paradoxical embolism;
      3. Absence of other risk factors of ischemic stroke, including but not limited to, any of the following:
         a. Atherosclerosis;
         b. Small vessel occlusion;
         c. Hypercoagulable state;
         d. Atrial fibrillation;
         e. Arterial dissection.
      4. None of the following contraindications:
         a. Intra-cardiac mass, vegetation, tumor or thrombus at the intended site of implant, or documented evidence of venous thrombus in the vessels through which access to the PFO is gained;
         b. Vasculature through which access to the PFO is gained is inadequate to accommodate the appropriate sheath size;
         c. Anatomy in which the Amplatzer PFO device size required would interfere with other intracardiac or intravascular structures, such as valves or pulmonary veins;
         d. Other source of right-to-left shunts, including an atrial septal defect and/or fenestrated septum;
         e. Active endocarditis or other untreated infections.

II. It is the policy of health plans affiliated with Centene Corporation® that the percutaneous transcatheter closure of PFO is experimental/investigational for the following:
   A. Devices not currently FDA-approved for PFO, including any of the following:
      1. CardioSEAL STARFlex Septal Closure System;

See Important Reminder at the end of this policy for important regulatory and legal information.
**Clinical Policy**

Transcatheter Closure of Patent Foramen Ovale

2. Buttoned Device;
3. Atrial Septal Defect Occluding System;
B. Migraine prophylaxis;
C. Primary stroke prevention;
D. Unexplained oxygen desaturation.

**Background**

The foramen ovale is a particular structure of the fetal circulation that fails to close and is present in 25% of the adult population, forming a PFO.\(^1,2\) The biological significance of PFOs have been widely debated in the literature for the last decade. Case control studies have established an association between an increased risk of ischemic stroke and the PFO.\(^1\) Three initial randomized controlled trials (e.g., the CLOSURE I study, the PC study, and the RESPECT study), as well as a meta-analysis of 14 trials, collectively demonstrate that there is no significant advantage for surgical PFO closure to improve ischemic stroke prevention over medical therapy.\(^7-10\)

However, four more recently published articles in *The New England Journal of Medicine* expand the body of work and extend analyses.\(^2-6\) Mas *et al.* for the CLOSE investigators assessed 663 patients and demonstrated reduced recurrent stroke rates after PFO closure compared to oral anticoagulation with antiplatelet medical therapy in patients with cryptogenic stroke.\(^2\) This finding was also validated by Søndergaard for the Gore REDUCE investigators in their analysis of 664 patients\(^4\). Furthermore, Saver *et al.* for the RESPECT investigators recapitulate earlier results in a multicenter trial, noting that closure of PFO was associated with a lower rate of recurrent ischemic stroke, after having followed 980 patients for a median of 5.9 years.\(^3\) A meta-analysis of 6 RCTS demonstrated benefits of PFO closure for secondary prevention of stroke among patients with cryptogenic stroke and small increase in risk of new onset atrial fibrillation.\(^24\)

The 2014 American Heart Association / American Stroke Association have not yet been updated to include recent randomized controlled trials (RCTs).\(^11\) The American Heart Association published a 2018 review that stated that recent RCTs have demonstrated the superiority of PFO closure over pharmacological treatment in reducing risk of recurrent ischemic stroke in certain patients, and that governing societies should rewrite their guidelines accordingly.\(^15\)

The American Academy of Neurology Practice advisory update summary on patent foramen ovale and secondary stroke prevention include the following recommendations:

- In patients being considered for PFO closure, clinicians should ensure that an appropriately thorough evaluation has been performed to rule out alternative mechanisms of stroke (level B).
- In patients with a higher risk alternative mechanism of stroke identified, clinicians should not routinely recommend PFO closure (level B).
- Clinicians should counsel patients that having a PFO is common; that it occurs in about 1 in 4 adults in the general population; that it is difficult to determine with certainty whether their PFO caused their stroke; and that PFO closure probably reduces recurrent stroke risk in select patients (level B).
- In patients younger than 60 years with a PFO and embolic-appearing infarct and no other mechanism of stroke identified, clinicians may recommend closure following a
discussion of potential benefits (absolute recurrent stroke risk reduction of 3.4% at 5
years) and risks (periprocedural complication rate of 3.9% and increased absolute rate of
non-periprocedural atrial fibrillation of 0.33% per year) (level C).²⁴

Coding Implications
This clinical policy references Current Procedural Terminology (CPT®). CPT® is a registered
trademark of the American Medical Association. All CPT codes and descriptions are copyrighted
2020, American Medical Association. All rights reserved. CPT codes and CPT descriptions are
from the current manuals and those included herein are not intended to be all-inclusive and are
included for informational purposes only. Codes referenced in this clinical policy are for
informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage.
Providers should reference the most up-to-date sources of professional coding guidance prior to
the submission of claims for reimbursement of covered services.

Clinical Policy
Transcatheter Closure of Patent Foramen Ovale

Important Reminder
This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a
discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of member/enrollees. This clinical policy is not intended to recommend treatment for member/enrollees. Member/enrollees should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, member/enrollees and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, member/enrollees and their representatives agree to be bound by such terms and conditions by providing services to member/enrollees and/or submitting claims for payment for such services.

**Note: For Medicaid member/enrollees**, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

**Note: For Medicare member/enrollees**, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs, and Medicare Coverage Articles should be reviewed prior to applying the criteria set forth in this clinical policy. Refer to the CMS website at [http://www.cms.gov](http://www.cms.gov) for additional information.
