Description
Idelalisib (Zydelig®) is a kinase inhibitor.

FDA Approved Indication(s)
Zydelig is indicated for the treatment of:

- Relapsed chronic lymphocytic leukemia (CLL), in combination with rituximab, in patients for whom rituximab alone would be considered appropriate therapy due to other co-morbidities
- Relapsed follicular B-cell non-Hodgkin lymphoma (FL) in patients who have received at least two prior systemic therapies*
- Relapsed small lymphocytic lymphoma (SLL) in patients who have received at least two prior systemic therapies*

*Accelerated approval was granted for FL and SLL based on overall response rate. Improvement in patient survival or disease related symptoms has not been established. Continued approval for these indications may be contingent upon verification of clinical benefit in confirmatory trials.

Limitation(s) of use:

- Zydelig is not indicated and is not recommended for first-line treatment of any patient.
- Zydelig is not indicated and is not recommended in combination with bendamustine and/or rituximab for the treatment of FL.
